

CHOICE VOICE

In 2002 the government passed the bill to de-regulate the national telephone service enabling other carriers to enter the market and offer cheaper phone calls, thus ending the BT monopoly.

Within both the larger corporate and SME marketplace cost management is a driving factor. Given the difficulty of reducing fixed costs, few businesses can afford to ignore the opportunity of least cost routing (LCR) in making their telecommunications more cost effective.

Using **Carrier Pre-Selection (CPS)**, Choice Numbers are able to offer highly competitive rates using the existing BT exchange to route your calls over our network ensuring high quality, reduced cost telephone calls for your business. This is possible via the multitude of carriers we have connected to our switch ensuring the high speed, reliable, least cost delivery of your calls.

By utilising **Choice Numbers** LCR switch functionality your company's telecommunication costs, whether calling to a mobile, abroad or anywhere in the UK your company could benefit from up to 60% saving on your telecoms charges.

Changing to **Choice Numbers** cost-effective voice products is a straightforward procedure without the need to change your existing telephone number or line. We can reduce your cost of calling mobile phones even more with the use of Fixed Cellular Terminals. This is a mobile device that connects to your telephone system and allows you to make calls to mobile phones using a SIM card on a mobile phone network. Mobile - Mobile calls can cost as little as 2.55 pence per minute (O2).

How this will benefit your organisation

You can save money on a variety of local calls, national and International.

You do not have to invest money in hardware and infrastructure.

Choice Numbers will work with you to ensure the service meets the needs of your business.

No need change your numbers.

CHOICE VOICE

Carrier Pre-Select (CPS) is a service allowing you to route your business outgoing calls over network. This will provide your company access to competitive call rates and a wide range of services. To change carriers is simple, Choice Numbers manages the entire process and there's no need to change your existing phone numbers.

Who it's for

CPS is suitable for any customer with BT lines who wishes to access better value call rates by using a simple implementation process with no service interruption.

How this will benefit your business

- You can save money on a variety of local calls, national and International.
- You do not have to invest money in hardware and infrastructure.
- Choice Numbers will work with you to ensure the service meets your business requirements.
- There is no risk of any calls accidentally leaking back over BT's network.

How it works

- CPS automatically diverts calls from BT to our network. There is no installation or programming of your equipment and there will be no need to dial a code to activate the service. This means more efficient routing of your calls maximising your savings.
- We will analyse your needs and complete all order forms required by BT.
- BT checks the information on the electronic order and, as long as it is correct, the service will be transferred 10 working days later.
- The service is provided at the local BT exchange meaning that no equipment needs to be installed at your premises. During this time you have the option to cancel the service with no penalty charges.
- Once the service is activated your calls will be transferred automatically.
- When changing to Choice Voice, there will be no interruption to your service and all existing telephone numbers can be retained.
- If at any time you want to override the service and route your calls back to BT you can do this by dialling a simple four digit code.
